

Ozi Explorer Update Version 2.19

Before you begin your OziExplorer update, you will need to establish your AVNC version to select the appropriate update. This is critical you get it correct to prevent any damage to your unit.

To begin with, find out what ROM Chipset version your unit is running. To do this go to the Menu, Options then go to the System Tab. It should look similar to the screen shot below.

Your unit will read OS: 6.5'EN-XXX-V1.06 - The XXX should either be NB, Net or SD2. Please take note of what chipset your unit is running.

On the table below, please make sure your unit's chipset corresponds with your serial number, if it doesn't please give us a call before proceeding. You can find your serial number on your original AVNC box or on the back of the unit itself. If you don't have easy access to retrieving your serial number feel free to call us before proceeding.

Once you select the appropriate update version. you will need to unzip the files and read the read me file for further instructions.
